+91 9559522633 ◇ Greater Noida/Varanasi, India

contact@saharshjais1423@gmail.com ◇ [linkedin.com/Saharsh Jaiswal](https://www.linkedin.com/Saharsh Jaiswal)

OBJECTIVE

Motivated Computer Science undergraduate with strong interest in Machine Learning and Software Development. Seeking internship opportunities to apply analytical thinking, data structures knowledge, and contribute to real-world projects.

EDUCATION

B.Tech in Computer Science 2nd Year, Bennett University, Greater Noida
Current CGPA: **8.74**

Expected 2028

SKILLS

Programming: Python, Java, C/C++, SQL, React, Node.js

Core Competencies: Data Structures & Algorithms, OOP, Problem Solving

Machine Learning: Scikit-learn, Pandas, NumPy, Matplotlib

Tools & Platforms: VS Code, Jupyter Notebook, Streamlit

Soft Skills: Leadership, Team Collaboration, Event Coordination, Analytical Thinking, Logistics

PROJECTS

Customer Churn Prediction System (Ongoing) — Python, ML, Streamlit

- Currently developing a machine learning pipeline to predict customer churn for subscription-based businesses.
- Working on data preprocessing, feature engineering, model training & comparison (Logistic Regression, Random Forest).
- Integrating the best-performing model in a Streamlit web interface for interactive predictions..

Tourist Footfall Prediction — Python, Machine Learning

- Predicted tourist visit patterns based on seasonal and historical dataset to support tourism demand forecasting.
- Used regression techniques and tuned parameters to improve prediction stability and performance.
- Represented results using visualizations to highlight trends and insights.

PaySure – Escrow Based Payment Security Platform (Ongoing) — Python, React, Node.js

- Developing a secure escrow platform enabling milestone-based payments between clients and freelancers to ensure trust and fraud prevention.
- Implementing a dual-approval payment workflow where funds are released only after verified task completion and mutual consent.
- Building a full-stack system using Python for backend logic, Node.js APIs, and React dashboards for project tracking, transactions, and dispute management.

Personal Portfolio Website — HTML, CSS

- Designed and developed a responsive portfolio site to showcase projects and technical profile.
- Implemented clean UI structure and optimized layout for smooth navigation.
- Hosted publicly for demonstration during interviews and professional networking.

EXTRA-CURRICULAR ACTIVITIES

- Participating in hackathons, coding contests, and ML workshops to enhance practical problem-solving.
- Experience in photo and video editing using tools like Canva, CapCut, Lightroom, and Snapseed for event media content.
- Continuously exploring ML model optimization and real-world deployment approaches.

LEADERSHIP EXPERIENCE

Logistics Head — IEEE Student Chapter (Present)

- Coordinating event logistics, planning, volunteer management, and operations for technical workshops and seminars.
- Actively collaborating with other core members to manage resources and ensure smooth event execution.
- Leading a team of volunteers and improving workflow efficiency for large-scale events.

Tech Co-Head — GeeksforGeeks Student Chapter (Present)

- Leading technical initiatives and coding events to promote problem-solving, competitive programming, and software development culture.
- Organizing hands-on workshops on Data Structures, Algorithms, Web Development, and emerging technologies.
- Managing technical sessions, hackathons, and coding contests to enhance peer learning and practical skills.
- Mentoring students in programming concepts and guiding juniors in project development and technical growth.
